ABOUT

As a frontend developer, I excel at crafting engaging digital experiences. I blend functionality seamlessly with aesthetics, creating memorable user-friendly interfaces.

Beyond coding, I'm passionate about creativity and illusionistic art, constantly exploring new techniques and pushing boundaries. As a self-learning enthusiast, I embrace each day as an opportunity for growth, mastering new frameworks, experimenting with emerging technologies, and delving into design theory.

PROJECTS

● Personal Website

I conceived and crafted a sleek personal website as my latest project, incorporating stylish design elements and multiple web pages. The site offers comprehensive insights into my skills, education, and professional journey. With easily accessible quick connection links, visitors can seamlessly engage with me, facilitating effective communication and networking.

● Comprehensive Personal Profile with a Single Index File

Initiating my journey into web development, I created my first project from the ground up. Utilizing a single index file, I crafted a personal website featuring distinct sections highlighting my profile details. This project marks my foundational step in web development, showcasing my ability to design and implement a cohesive digital presence.

EDUCATION

● **Mangalam College of Engineer**

Bachelor of Technology in Computer Science
APJ Abdul Kalam Technological University
2019-2023
